

2018.4 Maintenance Release

Table of contents

Minor Enhancements	1
Bug Fixes	1

Minor Enhancements

- The Course_Name placeholder has been added to the Timed Release email template.
- Time zone labels have been added to the Boost Quick Report and the Usage Quick Reports
- Marking Widget and marking list will show the same count, and this will only show active user markings required.
- User authorization for GoToTraining, Webex and Zoom are no longer “profile edits”. User authorization can be completed by a user viewing their own profile.

Bug Fixes

- ILT: Litmos will no longer delete users from past ILT sessions if they are deactivated. These users will only be deleted from future ILT sessions.
- Assessments: Users were not getting all assessment attempts “unlocked” when an admin reset assessment results for a user that had reached the maximum attempts for an assessment module in a course that enforced a course retake as a result of compliance expiration.
- Assessments: Assessments will only “unlock” once the unlock period has been reached.

- API: The "limit" parameter will not allow a value greater than 1000.
- API: The GET User Details endpoint always returned "skipfirstlogin" value for users as "false".
- API: GET session list was not providing the Instructor's username.
- Reporting Engine: SCORM data in reporting engine now matches the data in the SCORM Quick Reports.
- Manual Marking: Users were missing module completion dates if the modules were marked manually.
- Admin Dashboard: Grammar fix to Approvals Widget on the Admin Dashboard
- Manager View: Grammar fix to the Manager View when viewing escalations from direct reports.
- Litmos Ecommerce: Payment Express checkout was failing.
- External Learning: Uploading a 2nd document in a 2nd upload attempt would remove the original document uploaded.
- Litmos Dojo: Login error message when attempting to single-sign in into the Litmos Dojo.
- External Learning/Learner Uploads: The date formats have been corrected to align with user profile's chosen date format.
- Learner Upload: Only one file was processing when multiple files were uploaded by a Learner.
- Team Tree View: Team Tree was not displaying teams for Team Admins and Team Leaders.
- Quick Reports: Points and Badges reports scheduled for email were not being delivered.
- User Bulk Imports: The manager value was not processing in the import for a user if a Team value was also given for that user in the import.
- Quick Reports: Inactive courses incorrectly showed "0" people complete in the course.
- Namely Integration: Namely on-demand sync was not working
