

Industry: Healthcare
Use Case: Employee Training, Compliance Training

Ingenios Health **tackles compliance needs** with SAP Litmos

Ingenios Health Co. is a national provider of health assessments and other preventive services and delivers personalized care through technology-enabled engagement, assessment, and coordination. By meeting members in the convenience of their own home, their compassionate and highly trained nurse practitioners help to close any gaps in care through preventive and proactive measures. These services enable plans to accurately and preemptively identify risk and deliver care where it is needed most, leading to a better quality of life for plan members. Ingenios Health was founded in 2008 and was an early entrant into the home health assessment business. The company has developed significant expertise and has become a leader in the space, proving that proactive care can lead to better and more cost effective outcomes.

Training had always been done manually at Ingenios Health. All of their HIPAA training was paper-based and had a lot of steps involved. Their annual bloodborne pathogens classes were always in person and required travel and a lot of money spent. It was very difficult for them to keep track and more often than not, things would fall through the cracks. They knew they needed something available online and more efficient in order to maintain a successful training program with no compliance issues.

“We would be completely lost without SAP Litmos. **The customer care has been phenomenal.**”

Sarina Tate
Administration Manager
