

Training that sustains

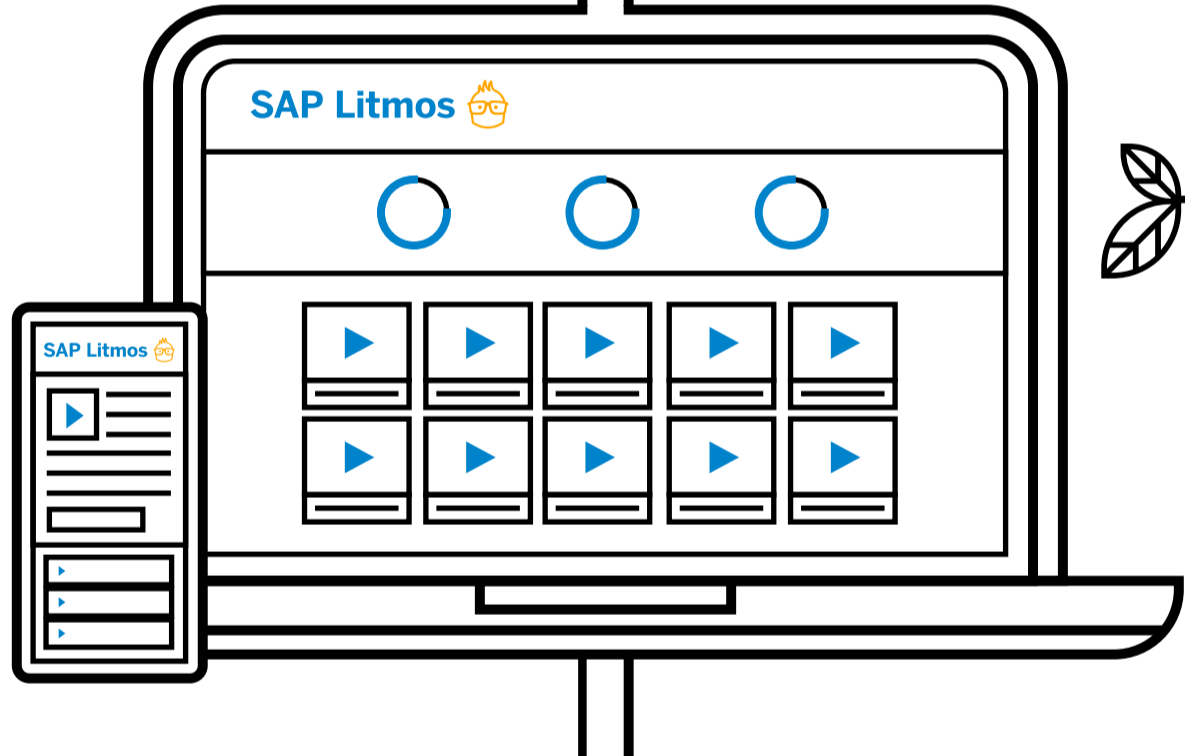

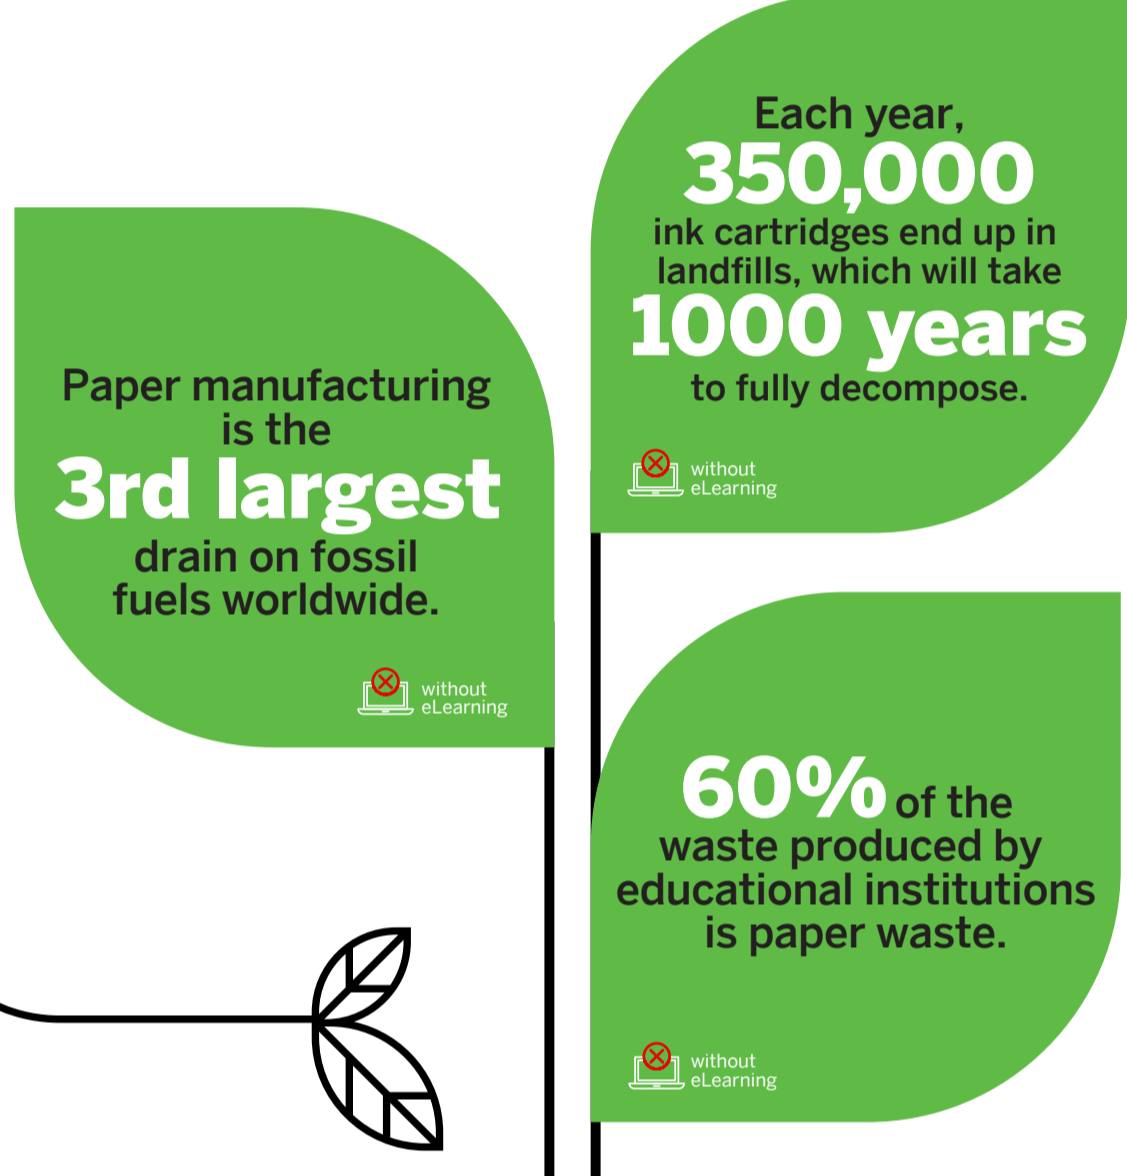

A learning environment that helps the environment

Did you know that traditional learning produces 45 times more CO₂ emissions than eLearning? Not only can online training help your learners thrive, but it also provides benefits that can help sustain our planet.

When your learners travel for training, whether it be by plane, train, or automobile, they are contributing to a **severely impacted environment**.

Traditional learning often requires printouts of content and informational assets, a wasteful practice.

with eLearning
Store courses and content in an online environment to completely eliminate paper/printing waste.

with eLearning
Discontinue the need to print manuals, binders, info sheets, and slide presentations.

-  **Saves money**
-  **Increases productivity**
-  **Good for the planet**

Dedicated spaces for in-person trainings produce a considerable amount of waste, something that can be decreased when you pivot your learning to an online environment.
